

CHAPTER 2: V. CATALOGING A BIOLOGY SPECIMEN

	<u>Page</u>
A. Overview	2:159
What types of specimens do I catalog as biology?	2:159
Where can I find information on cataloging?	2:159
How many screens does a biology record have?	2:159
How will I know which data are mandatory?	2:159
What if I have unverified data?	2:159
Do I have to complete every field?	2:159
Must I enter information from the field label or field notes for the specimen exactly as it appears or is recorded?	2:159
How do I add to or change information on an existing catalog record?	2:160
B. Adding a Biology Record	2:160
How do I get to my natural history records?	2:160
How do I get to my biology records?	2:160
How do I add a biology record?	2:161
How do I move through the record?	2:161
How do I access the supplemental records?	2:161
How do I cancel a record?	2:162
How do I save a record?	2:162
What are the Images and Multimedia tabs at the top of the catalog record?	2:162
Why does the same Description field appear on most of the tabs?	2:162
What are the catalog number and date in the upper right corner of the catalog record?	2:163
C. Field-by-Field Instructions	2:163
How do I complete the data fields on the registration screen?	2:163
How do I complete the data fields on the catalog screen?	2:175
How do I complete the data fields on the collection site screen?	2:181
How do I complete the data fields on the biology specialty screen?	2:186
How do I complete the data fields on the unit screen?	2:191
D. ITIS	2:192
What is ITIS?	2:192
Why is ITIS used?	2:192
How does ITIS work?	2:192
Is ITIS complete?	2:192
What should I do if ITIS hasn't completed the group I am cataloging?	2:192
How will ITIS be updated?	2:192
Why are some names listed as "valid" or "accepted" and some terms listed as "invalid" or "not accepted"?	2:192
How can I find the "valid" or "accepted" name?	2:193
Why are some of the Taxonomic Serial Numbers (TSN) negative?	2:193
How do Paleontology terms get into ITIS?	2:193
E. Find Specimen	2:193
What is Find Specimen?	2:193
Who can use Find Specimen?	2:193
Which fields will be updated?	2:193
How do I use Find Specimen?	2:194
F. Saving the Record	2:195
What is the Track Changes screen that appears when I save a catalog record?	2:195
How do I complete the condition tracking supplemental?	2:196
How do I complete the location tracking supplemental?	2:196

	How do I complete the catalog notes tracking supplemental?	2:197
	How do I complete the scientific name tracking supplemental?	2:198
G.	Supplemental Records	2:198
	How do I complete the supplemental records that are associated with a biology record?	2:198
	What supplemental records are created automatically by the program?	2:198
	How do I know whether a supplemental record contains information?	2:198
H.	Printing the Record	2:199
	How do I print a catalog record?	2:199
	Must I print a catalog record?	2:200
I.	Mass Taxonomy Update.....	2:200
	What is Mass Taxonomy Update?	2:200
	Who can use Mass Taxonomy Update?	2:200
	How do I access Mass Taxonomy Update?	2:201
	Which records will be updated?	2:201
	Which fields will be updated?	2:201
	Will previous Scientific Names be saved?	2:201
	How does Mass Taxonomy Update change a record?	2:201
	How will I know which records were updated?	2:201
	Why might a record not be updated?	2:202
	How do I use Mass Taxonomy Update?	2:202

CATALOG DATA FIELDS INDEX

Biology Data Fields

	Lower Taxon.....	2:187	+	UTM Coordinates.....	2:184
	Maintenance Cycle.....	2:177		Waterbody/Drainage.....	2:184

! Mandatory Field

Must complete either Item Count or Quantity

+ Must enter Latitude and Longitude, Township/Range/Section, or UTM Coordinates.

@ The program enters 'Not Provided' if you do not complete this field

V. CATALOGING A BIOLOGY SPECIMEN

A. Overview

1. *What types of specimens do I catalog as biology?*

Biology is the science of life and living organisms, including their structure, function, growth, origin, evolution, and distribution. It includes botany and zoology and all their subdivisions. Biology specimens are present day organisms that are identified, sorted, classified and cataloged according to their evolutionary relationships.
2. *Where can I find information on cataloging?*

Refer to the *Museum Handbook*, Part II (*MH-II*), Chapter 3, Cataloging, or the *Museum Property Handbook*, Volume II (*MPH-II*), Chapter 3, Cataloging, for general information on cataloging specimens. Refer to your site-specific cataloging procedures, if available.

Refer to the *MH-II*, Appendix H, Natural History and *MPH-II*, Appendix N, Optional Data for Natural History, for additional information on cataloging natural history specimens.
3. *How many screens does a biology record have?*

The basic catalog record consists of five screens:

 - registration (for basic collections accountability data)
 - catalog (for descriptive data)
 - collection site (for data on the collection site of the specimen)
 - biology specialty (discipline-specific screen for descriptive data)
 - unit (for unit-specific data that the user defines)

In addition, there are numerous supplemental record screens that can relate to the catalog record. Refer to Chapter 3, Supplemental Records.
4. *How will I know which data are mandatory?*

The instructions in this manual and the on-line help will indicate which fields are mandatory. If you do not enter data in a mandatory field, the program will do one of the following:

 - not allow you to save the catalog record, *or*
 - enter "Not Provided" in the field
5. *What if I have unverified data?*

It is important to distinguish between unverified data and documented fact. Use a question mark "?" or "(att)" for attributed, to indicate data that are probable but not certain.
6. *Do I have to complete every field?*

Not every specimen will be sufficiently documented to allow completion of all fields. If information is not known, leave the field blank.
7. *Must I enter information from the field label or field notes for the specimen exactly as it appears or is recorded?*

Yes. Recording information exactly as it appears on the field label or tag placed with the specimen by the researcher is necessary to maintain the scientific value of the specimen.

Note: You may correct misspellings of scientific names so that you are able to obtain a complete taxonomy through ITIS. See Section D for information on ITIS.

8. *How do I add to or change information on an existing catalog record?*

To modify a record:

- click on the modify icon  on the button bar, *or*
- go to Edit on the menu bar and choose Modify This Record from the pull-down menu, *or*
- press the F10 key

A new window will open and you will see "Modify Mode" in the lower- right corner. You can then modify and save the record.

B. Adding a Biology Record

1. *How do I get to my natural history records?*

To access your natural history records:

- From the Home Page or Navigator, double-click on Collections, or expand the tree view for Collections by clicking the  icon in front of it (if it is already expanded you will see the  icon).
- At the Collection Directory Page (or under Collections in the tree view), double-click on the Natural History directory for your unit.
- At the Natural History directory page, double-click on Catalog Records.

You should see the first record in your natural history database in the Record Pane on the lower right.

2. *How do I get to my biology records?*

To view all your biology records together:

- on the button bar, click on the Sort pull down menu  and select By Class 1-Discipline, *or*
- click on Record on the menu bar, go to Sort and on the list of sorts select By Class 1-Discipline

The List Pane will change to show 'Class 1' in the first column. The program has sorted the natural history records by Class 1.

Collections - PARK - Natural History - Catalog Records			
Drag a column header here to group by that column			
Class 1	Specimen	Catalog #	
BIOLOGY	Cephaloziella subgentata	PARK	1003
BIOLOGY	Ceratodon purpureus (Hedw.) Brid.	PARK	1004
BIOLOGY	Cinclidium subrotundum Lindb.	PARK	1005
BIOLOGY	Cirriphyllum cirrosum (Schwaegr.) Gr...	PARK	1006
BIOLOGY	Climacium dendroides (Hedw.) W. & M.	PARK	1007
BIOLOGY	Dicranoweisia crispula (Hedw.) Lindb.	PARK	1008
BIOLOGY	Dicranoweisia crispula (Hedw.) Lindb.	PARK	1009
BIOLOGY	Dicranum elongatum Schleich.	PARK	1010

To see the biology records:

- click on any record in the Class 1 column of the List Pane and type “B”,
or
- click on the Find icon  on the button bar and type “Biology” in the Find box

This will bring you to the Biology records. To view a record, click on the row in the List Pane and that record will appear in the Record Pane below.

3. *How do I add a biology record?*

To add a new record:

- click on the add icon  on the button bar, *or*
- go to Edit on the menu bar and choose Add New Record from the pull-down menu, *or*
- press the F9 key

A new window opens. “Add Mode” is indicated in the lower right of the status bar. You can then add and save a record.

4. *How do I move through the record?*

Within the Field

Press the Home key to get to the beginning of a field or the beginning of a line of text in a memo field. Press the End key to get to the end of the text in a field or the end of a line of text in a memo field.

Field to Field

Press the Tab key to go from field to field. Shift-Tab will take you back one field. You can also move the mouse pointer to the field and single-click.

Page to Page

To move from page to page within a record:

- click on the page tabs at the top of the record, *or*
- press Ctrl-R (previous page) or Ctrl-N (next page), *or*
- press the Left and Right arrow keys (if the page tabs are already selected),
or
- go to View on the menu bar and choose Previous Page or Next Page

5. *How do I access the supplemental records?*

To access supplemental records :

- click on the Supplemental Information tab on the catalog record, *or*

- press Ctrl-R or Ctrl-N until the page you want
6. *How do I cancel a record?* To cancel the record without saving the data:
- click on Cancel on the lower right corner of the screen, *or*
 - click on the Cancel icon  on the button bar, *or*
 - go to File on the menu bar and select Cancel
7. *How do I save a record?* To save a record:
- click Save and Close on the lower right corner of the screen, *or*
 - click the Save and Close icon  on the button bar, *or*
 - go to File on the menu bar and select Save and Close
- Note:** You can also use the Save option instead of Save and Close. Save leaves the record window open in View mode after saving while Save and Close closes the record window after saving.
- If you have not entered data in all the mandatory fields, the program will prompt you to enter the data. The message will list all required fields that have not been completed. The program then asks if you want to save the record as a draft.
- | <i>If you choose...</i> | <i>Then the program...</i> |
|--------------------------------|--|
| Yes, | prompts you for tracking information for location, condition, scientific name and catalog notes (see Section F). You can choose not to update the supplemental information for these or enter the information. The program then enters "Draft Record" in the Object Status field and saves the record. Note: The program won't allow you to save a draft record if you have a duplicate catalog number. |
| No, | returns you to the screen to complete the mandatory field(s). Note: The mandatory fields will be marked with  to indicate which fields are required. |
- Remember to update the Object Status field for all draft records. A draft record is not an official record. The CMR doesn't count draft records. For the NPS, the National Catalog doesn't count or print draft records.***
8. *What are the Images and Multimedia tabs at the top of the catalog record?* You can attach and display many images of the object on the Images tab. The Multimedia tab allows you to attach other media files such as video and sound clips, documents, spreadsheets, PDF files, etc. Refer to Appendix G in this manual for information on Imaging and Multimedia.
9. *Why does the same Description field appear on most of the tabs?* The program displays a few lines of the Description field at the top of each of the catalog record's pages, with the exception of the discipline-specific page. You can enter data into any of the screens where the Description field appears and you will see the data you entered on all the screens that have the Description field.

10. What are the catalog number and date in the upper right corner of the catalog record?

The catalog number identifies the record. It appears as soon as you enter the number in the Catalog # field. The log date appears when you save the record. It indicates the date the record was entered into the computer.

C. Field-by-Field Instructions

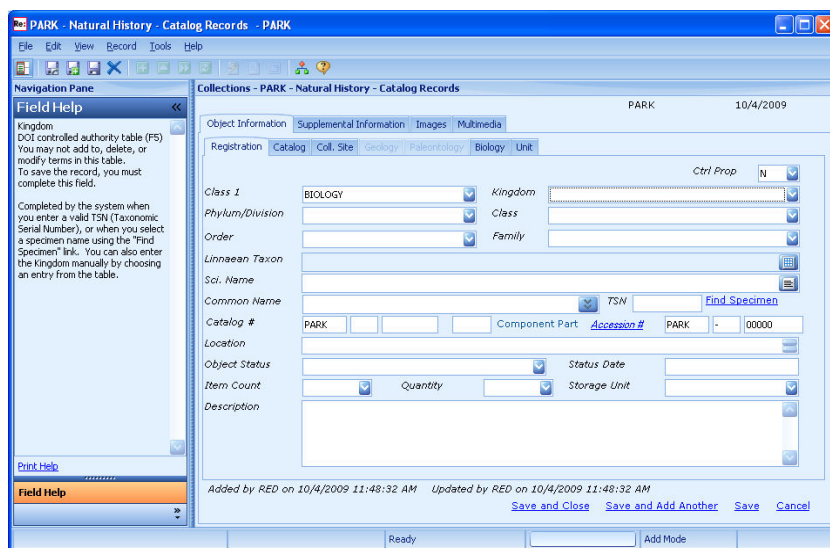

1. How do I complete the data fields on the registration screen?

Follow the field-by-field instructions for completing the fields on the registration screen. The instructions for each field are on the left side of the screen as you add or modify a record. Remember to press the Tab key to move out of a field.

Note: If you do not see the field help on the screen, go to View on the menu bar, choose Navigation Pane Options, and select Field Help.

Note: Fields marked with a **!** in this manual are mandatory fields. You must complete these fields.

Remember to enter an accession record for the catalog record before you begin to catalog. Refer to Section 1 of Chapter 4 for information on entering accession records. You can also access the accession record from the catalog record as you enter the catalog data by clicking the Accession link.

!Controlled Property
(Ctrl Prop)

Logical Y/N field. **To save the record, you must complete this field.**

Type "Y" or "N." You can click on the arrow to see a pull-down menu of Y or N. Highlight the entry you want and single-click or press the Enter key.

Select "Y" (Yes) for controlled property. You must designate the following types of specimens as controlled property:

- specimens with a value of \$1,000 or more
- type specimens
- incoming loans (with the exception of incoming loans to repositories)

- specimens especially vulnerable to theft, loss, or damage

Select "N" (No) for non-controlled property.

!Classification Line 1 (Class 1)

Bureau controlled table (F5). **To save the record, you must complete this field.** You may not add to, delete, or modify terms in this table.

Enter: BIOLOGY

Type "B" and the program will autofill the entry. Or you can press the F5 key or click the down arrow to view and select 'BIOLOGY' from the table.

The Biology discipline tab will become active at the top of the record.

Note: Catalog field notes as archives. Refer to Section II in this chapter and the *MPH-II*, Appendix C: Historical and/or Scientific Document Collections, or the *MH-II*, Appendix D: Archival & Manuscript Collections.

After entering Biology in Class 1, you can skip to the TSN field and enter a valid TSN or, if you do not know the TSN, click Find Specimen to locate and select the specimen name from the ITIS table. The program will automatically complete these taxonomic classification fields for you: Kingdom, Phylum/Division, Class, Order, Family, Linnaean Taxon, Scientific Name, Common Name and TSN. Refer to Sections D and E below for information on ITIS and using the Find Specimen function.

Or, you can enter the classification fields manually as follows.

!Kingdom

Bureau controlled table (F5). **To save the record, you must complete this field.** You may not add to, delete, or modify terms in this table.

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the Find Specimen link. You can also enter the Kingdom manually by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

!Phylum/Division

User-built table (F5, Ctrl-F5). **To save the record, you must complete this field.**

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the Find Specimen link. You can also enter the Phylum/Division manually by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

!Class

User-built table (F5, Ctrl-F5). **To save the record, you must complete this field.**

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the [Find Specimen](#) link. You can also enter the Class manually by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click [Add Term](#). After entering the term, click [Save Change](#). Click [Select](#) to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Order

User-built table (F5, Ctrl-F5).

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the [Find Specimen](#) link. You can also enter the Order manually by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click [Add Term](#). After entering the term, click [Save Change](#). Click [Select](#) to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Family

User-built table (F5, Ctrl-F5).

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the [Find Specimen](#) link. You can also enter the Family manually by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click [Add Term](#). After entering the term, click [Save Change](#). Click [Select](#) to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Linnaean Taxon

Repeating Formatted Memo field (click the repeating formatted memo icon to zoom). This field is "read-only" and cannot be edited by the user.

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the [Find Specimen](#) link. The field displays all hierarchical ranks for the specimen, as found in the Integrated Taxonomic Information System (ITIS).

Note: If no valid TSN is provided, Linnaean Taxon is inactive. See Sections D and E for information on ITIS and Find Specimen.

Composite Classification

Research projects may result in composite samples, such as plankton tows or an insect sweep net sample. You can classify composite samples in one of two ways:

- according to the specimen of primary interest, *or*
- by entering COMPOSITE in the Class field (You may also enter COMPOSITE in Phylum/Division, if needed.)

Unknown Classification

Sometimes a biology specimen is not fully identified when the specimen label is prepared. If you do not know the classification entry, you may enter UNIDENTIFIED in Phylum/Division and Class as needed.

Specimens without a Class Entry

Some biological specimens, such as fungi, have only Kingdom and Phylum/Division entries. If a specimen doesn't have a Class entry, enter UNUSED in the Class field.

! *Scientific Name (Sci. Name)*

Formatted memo field. Press F12, or right-click and select zoom from the menu to expand the field, or click the formatted memo icon  located in the field. The field will also expand as you type. History tracking field that links to the Scientific Name supplemental record. **To save the record, you must complete at least the Genus subfield of this field.**

Completed by the system when you enter a valid TSN (Taxonomic Serial Number), or when you select a specimen name using the [Find Specimen](#) link. If a scientific name is not already listed in the ITIS taxonomy module, you can also enter the data manually. See the user-built table instructions under Genus below.

The field expands into fifteen subfields: Genus, Species Modifier, Species, Species Authority, Species Year, Subspecies, Subspecies Authority, Subspecies Year, Variety, Variety Authority, Variety Year, Forma, Forma Authority, Forma Year, and Descriptive Name.

An underline separates the subfield entries on the registration screen. If the specimen is unidentified, refer to the *MH-II*, Appendix H. If the specimen requires a descriptive name, use the Descriptive Name subfield to enter the name. You may also use the Descriptive Name field to enter additional specimen names for composite specimens.

Example: Ailanthus_cf._lesquereuxi_Marsh_1958

Example of unidentified specimen: Plant, unidentified

Example of descriptive name: Insect Sweep Net Sample

The program allows you to track changes in scientific name. If you add or modify a scientific name, the program will include the Scientific Name supplemental in the Track Changes window when you save the record. A history of scientific name changes appears in the Scientific Name

supplemental record. Refer to Section XXII of Chapter 3 for information on the Scientific Name supplemental record.

If you wish to enter the Scientific Name manually, use the following subfield instructions:

For user-built tables, as you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the subfield. Follow this procedure for all user-built table subfields in the Scientific Name formatted memo screen.

Press Ctrl-Delete to remove unwanted entries.

For all authority subfields, the user-built table links to the Names and Addresses associated module. As you type, the name will complete from an authority table of names in the Names and Addresses associated module.

Press the F5 key or click the person icon  to view and select names from the table, or press F12 for an expanded field that allows you to enter terms from the table.

Users with the appropriate security rights can add, delete, or modify names in the table. To add a name to the table, right click in the field, and select Browse Authority Table or press Ctrl-F5, then click Add. The Names and Addresses associated module screen will appear. Enter the name in the Name ID field and complete the other fields on the screen. You can also press F12, click on the Edit Authority Table link, and then click Add. The entry you add will appear in the table. You can then select it from the table.

Genus (user-built table):

Enter the generic name of the specimen, which is the first element of the scientific name.

Example: Ailanthus

Species Modifier (user-built table):

Enter the Latin abbreviation antecedent to species to reflect certainty of identification. You will only use this field in special situations.

Example: cf.

Species (user-built table):

Enter the specific epithet, which is the second element of the scientific name.

Example: lesquereuxi

Species Authority (user-built table that links to the Names and Addresses associated module):

Enter the authority as it appears on the specimen label. Do not add an authority if it is not on the label.

Example: Marsh

Species Year (flexible date field):

Enter the year of identification by the species authority.

Example: 1958

Sub-specific Categories

Specimen labels will often recognize taxonomic categories below the species level. The three most widely used sub-specific categories are subspecies, variety, and forma. When the label includes sub-specific categories, add them to the appropriate field. The correct usage of these categories varies between the different disciplines of biology. Most labels will usually have at most one sub-specific category. Refer to the *MH-II*, Appendix H for additional information.

Subspecies (user-built table):

Enter the name of the subspecies. In the example, *Cervus elaphus nelsoni* Bailey 1935, "nelsoni" is the subspecies.

Subspecies Authority (Subspec Authority) (user-built table that links to the Names and Addresses associated module):

Enter the authority as it appears on the specimen label. Do not add an authority if it is not on the label. In the subspecies example above, "Bailey" is the authority.

Subspecies Year (Subspec Year) (flexible date field):

Enter the year of identification by the subspecies authority. In the subspecies example above, "1935" is the year of identification.

Variety (user-built table):

Enter the name of the variety. In the example, *Pseudotsuga menziessii* (Mirb.) Franco var. *glauca* (Mayr) Franco 1942, "glauca" is the variety.

Variety Authority (Variety Auth) (user-built table that links to the Names and Addresses associated module):

Enter the authority as it appears on the specimen label. Do not add an authority if it is not on the label. In the variety example above, "(Mayr) Franco" is the authority.

Variety Year (flexible date field):

Enter the year of identification by the variety authority. In the variety example above, 1942 is the year of identification.

Forma (user-built table):

Enter any other lower sub-specific category, such as forma or race.

Forma Authority (Forma Auth) (user-built table that links to the Names and Addresses associated module):

Enter the authority as it appears on the specimen label. Do not add an authority if it is not on the label.

Forma Year (flexible date field):

Enter the year of identification by the authority.

Descriptive Name (Desc. Name) (memo field, F12 to expand):

Enter the descriptive name for the specimen. Standardize names as much as possible.

Example: *Mimus polyglottus*, nest [entry for the nest of a mockingbird]

Note: You may also use this field to enter additional specimen names for composite specimens.

Synonym (user-built, stacked table)

Different names given to the same taxon (biological entity) are synonyms. Synonyms are often discovered during major revisions of taxonomic groups. The first published name for a taxon is the senior synonym and all subsequently published names are called junior synonyms. A name becomes a senior synonym at the time when a second name for the same taxon is published. There are two kinds of synonyms. Objective synonyms occur when different names are proposed based on the same type specimen or a new name is proposed because the original name of the type specimen is preoccupied. Subjective synonyms exist when two different type specimens, each with a different name, are found to be the same organism. This can happen when the male and female look different or different age classes of an organism look different and are originally thought to represent two different organisms.

You can make multiple entries from the expanded field (F12). After entering the first term, click the Add link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another term from the table. When saved, a double dash - - separates entries. Click Delete or press Ctrl-Delete to remove unwanted entries.

Common Name

User-built, stacked table (F5, Ctrl-F5, F12)

Completed by the system when you enter a valid Taxonomic Serial Number (TSN), or when you select a specimen name using the Find Specimen link. If no valid TSN is provided, enter the common name for the specimen by choosing an entry from the table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table, or press F12 for an expanded field that allows you to enter terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change, then click Select to enter the term in the field. The expanded field (F12) also allows users to add, delete, and edit.

You can make multiple entries from the expanded field (F12). After entering the first term, click the Add link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another term from the table. When saved, a double dash -- separates entries.

Click Delete or press Ctrl-Delete to remove unwanted entries.

Taxonomic Serial Number (TSN)

Straight entry field with seven characters.

Enter the TSN, the unique number assigned to each name in the Integrated Taxonomic Information System (ITIS) standard taxonomic database.

Example: 175300 (represents *Accipiter gentilis*)

When you enter a valid TSN and tab out of the field, the system will automatically fill in these fields: Kingdom, Phylum/Division, Class, Order, Family, Linnaean Taxon, Scientific Name, and Common Name.

See Section D for further information on ITIS, or visit their web site at <http://www.itis.gov>.

!Catalog Number (Catalog #)

For NPS, this is a 3-part 12-character field (sortable by acronym and number). For DOI, this is a regular, unedited, 20-character field. **To save the record, you must complete this field.**

NPS Catalog Number format:

Catalog #

- The first part is the four-letter park acronym, in the form of "AAAA." (**Note:** The acronym will autofill from the record you were viewing when you began to Add a new record.)
- The second part is a collection designation. Leave this space blank if the park has only one collection.

If the park has different units that have separate accession and catalog systems, enter a collection designation in the form of a letter, for example, A, B, C. Only a few parks will use this designation.

The Chief Curator must approve the designation. Review requests to use a designation with the Regional Curator. Send requests in writing to the Chief Curator, WASO.

- The third part is the unique sequential number assigned to a specimen, for example, 9999999.

Example: SHEN 190
YELLOW6778 [The Yellowstone NP number contains an O as a designation for the herbarium collection.]

DOI Catalog Number format:

Catalog #

Enter a catalog number using a standard format. The first part of the catalog number should be your unit acronym.

Example: BLM 1976.003.001

Note: The program will not allow you to enter a catalog number of "0" or a duplicate catalog number. After you enter the catalog number, it appears above the record in the upper right corner.

Component Part

4-character field in the form of "a-aa" that links to the Component Parts supplemental record.

Enter suffixes for component parts of specimens that you consider to be a single unit, such as a skull and skin. Refer to *MH-II*, Appendix C, or to *MPH-II*, Appendix J, for a further explanation of component parts.

Component part designations:

No. parts	Entry
2	a-b
3	a-c
26	a-z
27	a-aa
52	a-az
53	a-ba
78	a-bz

Enter descriptions of each component part in the Component Parts supplemental record. To access the supplemental record, click on the Component Part link, or tab to the link and press the Enter key. Refer to Section IV of Chapter 3 for information on the Component Parts supplemental record.

!Accession Number (Accession #)

For NPS, this is a 3-part 10-character field.

For DOI, this is a regular, unedited, 20-character field. **To save the record, you must complete this field.**

NPS Accession Number format:

Accession #	PARK	-	00000
-------------	------	---	-------

- The first part is the four-letter park acronym, in the form of "AAAA."
(**Note:** The acronym will autofill from the record you were viewing when you began to Add a new record.)
- The second part is a hyphen, which distinguishes the accession number from the catalog number.
(**Note:** The hyphen will autofill from the record you were viewing.)

If the park has different units with separate accession and catalog systems, enter a collection designation in the form of a letter, for example, A, B, C, in place of the hyphen. Only a few parks will use a collection designation.

The Chief Curator must approve the designation. Review requests to use a designation with the Regional Curator. Send requests in writing to the Chief Curator, WASO.

- The third part is the 5-digit identification number assigned to an accession, for example, 99999. The program automatically pads the number with zeroes.

Example: YOSE-00001
JELAB00072 [The Jean Lafitte NHP accession number contains a B as a designation for the Barataria collection.]

DOI Accession Number format:

Accession #

Enter the number for the accession using a standard format. The first part of the accession number should be your unit acronym.

Example: BLM 1976.003

Note: The accession number links the catalog record to the Accession Records associated module. Refer to Section I of Chapter 4 for information on the Accession Records associated module. The accession record contains the Acquisition Type and Acquisition Date fields that appear on the Museum Catalog Record (NPS Form 10-254B or DOI NH Museum Catalog Record). To go to the accession record, click on the Accession link on the screen. You can view, add, or modify the accession record for the specimen you are cataloging. Click on Save and Close to return to the catalog record screen. You cannot view, add, or modify the other accession records in the module from this link.

!Location

Memo field (F12 to expand). History tracking field that links to the Location supplemental record. **To save the record, you must complete this field.**

Enter the physical storage location of the specimen, starting with the most general location. For example, enter the building number or name, room number, cabinet number, and the shelf number.

Pad location numbers with zeroes if you want to sort by location. For example, use DR04 rather than DR4.

Develop standardized terms and abbreviations for storage areas and use these consistently. Enter locations from general to specific. Separate entries with a space.

A list of recommended abbreviations:

HS	Historic Structure
BLDG	Building
RM	Room
CAB	Cabinet
FCAB	File Cabinet
FCDR	File Cabinet Drawer
MC	Map Case
C	Case
SEC	Section
SH	Shelf
R	Rack
BX	Box
DR	Drawer
U	Unit

Example: HS 1 RM 101 SH 5
BLDG 18 RM 1 U 13

For specimens stored outside the unit, enter the name of the institution where the specimens are located, such as WACC or University of Texas.

Note: If specimens are located in another institution, you can also enter a tracking number used by that institution.

Example: WACC-254

The program allows you to track changes in location. If you modify a location, the program will include the location supplemental in the Track Changes window when you save the record (see Section F below). A history of location changes appears in the Location supplemental record.

Refer to Section XII of Chapter 3 for information on the Location supplemental record.

!Object Status

Bureau controlled table (F5). History tracking field that links to the Object Status supplemental record. **To save the record, you must complete this field.** You may not add to, delete, or modify terms in this table.

Enter the current status of the specimen. Choose from the following options:

Deacc - Conveyance (Donation)
Deacc - Destructive Analysis
Deacc - Exchange
Deacc - Involuntary Destruction
Deacc - Loss
Deacc - NAGPRA Compliance
Deacc - Return to Rightful Owner
Deacc - Theft
Deacc - Transfer DOI
Deacc - Transfer NPS
Deacc - Transfer Other Federal Agency
Deacc - Voluntary Destruction/Abandonment
Draft Record
Exhibit
Incorporated into Larger Archival Collection
Loan Out - Non-NPS (or Loan Out - Non-Bureau - Federal)
Loan Out - Non-NPS - Non-Federal (or Loan Out - Non-Bureau - Non-Federal)
Loan Out - NPS (or Loan Out - Bureau)
Missing
Record Inactive
Removed - Non-Museum property
Storage

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

The program tracks changes in status but doesn't prompt you to enter a reason when you modify a status. A history of status changes appears in the Object Status supplemental record. You can go into the supplemental record and add a reason for status changes, if needed.

Refer to Section XIV of Chapter 3 for information on the Object Status supplemental record.

Remember to update the Object Status field. The program pulls data for the CMR from this field and the Status Date field.

!Status Date

Straight entry numeric field. **To save the record, you must complete this field.**

Enter the 4-digit fiscal year for which the status applies.

Example: 1990
2001

Note: The fiscal year runs from October 1 - September 30. The program uses the fiscal year to pull Object Status and Status Date data for the CMR.

!Item Count

Straight entry numeric field. **To save the record, you must complete either the Item Count or the Quantity field.**

You must enter either an item count or a quantity (see the following field). There is a calculator linked to the field to help you calculate an accurate count or quantity. Click on the down arrow icon to use the calculator. (Press F4 to close the calculator.)

Enter 1 for a single specimen, even if the specimen has component parts. If the specimen is lot cataloged, enter the total number of specimens in the lot. Refer to the *MH-II*, Appendix I, or the *MPH-II*, Appendix E, for information on cataloging lots.

Example: 1 herbarium sheet with root, stem, and flower = 1
1 nest with three eggs = 1
Skin and skull of a lynx = 1
10 monarch butterflies = 10

When you enter an item count, the program automatically enters "EA" in the Storage Unit field. If you do not have an item count, leave the field blank.

Note: A herbarium sheet that contains various parts of a plant is counted as one item. The skin and skull or individual bones of a skeleton are considered component parts of a single item as well. See the Component Parts field above for information on listing the individual elements of a specimen.

!Quantity

Straight entry numeric field with one decimal place. **To save the record, you must complete either the Item Count or the Quantity field.**

You must enter either an item count or a quantity (see the previous field). There is a calculator linked to the field to help you calculate an accurate count or quantity. Click on the down arrow icon to use the calculator. (Press F4 to close the calculator.)

For bulk specimens (specimens that cannot be readily counted), enter the number of storage units, such as bag or box. If you enter a quantity, the Storage Unit field cannot be "EA." If you do not have a quantity, leave the field blank.

Example: 3 samples from a plankton net tow = 3.0
1 light trap sample = 1.0

!Storage Unit

User-built table (F5, Ctrl-F5). Default value "EA" when the Item Count is greater than zero. **To save the record, you must complete this field.**

Enter the type of storage unit for bulk specimens (specimens that cannot be readily counted). This is the storage unit for the quantity. For example, the quantity for 1 light trap sample is 1.0 and the storage unit is Vial.

Example: Bag
Vial

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Description

Memo field (F12 to expand).

Enter a description of the specimen. The description should provide enough information to identify the specimen from others. Enter the most distinguishing and significant features of a specimen. Do not use unauthorized abbreviations or codes.

Note: this field appears on and can be edited from all other tabs except the discipline tabs.

You have completed the registration screen. Click on the Catalog tab or press Ctrl-N to go to the catalog screen.

2. How do I complete the data fields on the catalog screen?

Follow the field-by-field instructions for completing the fields on the catalog screen. The instructions for each field are on the left side of the screen as you add or modify a record. Remember to press the Tab key to move out of a field.

Note: If you do not see the field help on the screen, go to View on the menu bar, go to Navigation Pane Options, and select Field Help.

Note: Fields marked with a ! in this manual are mandatory fields.

Dimensions/Weight (Dimens/Weight)

Memo field (F12 to expand).

Enter the dimensions and/or weight of the specimen. Use metric measurements whenever possible. Do not convert English measurements from old catalog records or natural history labels. See *MH-II*, Appendix C, or the *MPH-II*, Appendix K, for instructions on standardized formats for recording measurements.

The field contains space to enter both metric and English measurements.

Collector

User-built, stacked table (F5, Ctrl-F5, F12) that links to the Names and Addresses associated module. The program will enter "Not Provided" if you do not complete this field.

Note: If there are no names in the Names and Addresses associated module, you must enter them into the authority table before you can enter the name in this field.

Enter the full name of the person, last name first, who collected the specimen.

Example: Merriam, C. Hart

As you type, the word will complete from an authority table of names that have already been entered in the Names and Addresses associated module.

Press the F5 key or click the person icon  to view and select names from the table, or press F12 for an expanded field that allows you to enter terms from the table.

If a name is not already listed in the authority table, users with the appropriate security rights can add, delete, or modify names in the table. To add a name to the table, right click in the field, and select Browse Authority Table or press Ctrl-F5, then click Add Term. The Names and Addresses associated module screen will appear. Enter the name in the Name ID field and complete the other fields on the screen. You can also press F12, click on the Edit Authority Table link, and then click Add. The entry you add will appear in the table. You can then select it from the table.

You can make multiple entries from the expanded field (F12). After entering the first name, click the Add link or press the down arrow on the keyboard.

An additional field appears below the first entry for you to select another name from the table. When saved, a double dash - - separates entries.

Click Delete or press Ctrl-Delete to remove unwanted entries.

Note: The record link icon  next to the person icon allows you to view the Names and Addresses record for your entry.

Refer to Section XII of Chapter 4 for information on the Names and Addresses associated module.

!Collection Number
(Collection #)

Memo field (F12 to expand). The program will enter "Not Provided" if you do not complete this field.

Enter the field number or other identifying number the collector assigned to the specimen.

!Collection Date

Flexible date field. You must complete this field if you have a collection date.

Enter the date(s) on which the collector collected the specimen. Enter the most complete date possible and the full year.

You can enter the date directly, or press F12 or click the calendar icon for the flexible date entry screen. The flexible date entry allows you to enter a beginning and ending date by century or year, month, and day. It includes a user-built table of modifiers, for entries such as "circa." Refer to Chapter 1, System Basics, for additional instructions on flexible date fields. Use of the flexible date screen is optional.

Maintenance Cycle
(Maint. Cycle)

Straight entry numeric field.

Enter the cycle of years (up to 9.9 years) in which a condition check or preservation /treatment will be needed. You may enter one decimal place for a portion of a year. The year of initiation follows the slash (/).

Example: 5.0/1986 [entry for 5 years starting in 1986]
1.5/1990 [entry for 18 months starting in 1990]
0.5/1994 [entry for 6 months starting in 1994]

Use the Preservation/Treatment associated module to describe the type of maintenance that the specimen needs. Refer to Section VII of Chapter 4 for information on the Preservation/Treatment associated module.

!Condition

Bureau controlled table (F5). History tracking field that links to the Condition Reports supplemental record. **To save the record, you must complete this field.** You may not add to, delete, or modify terms in this table.

Enter the condition of the specimen using one term from each of the two criteria groups:

GROUP I

COM: Complete [100% of specimen present]

INC: Incomplete [>50% and <100% of specimen present]

FRG: Fragment [≤50% of specimen present]

GROUP II

EX: Excellent [no damage or deterioration]
GD: Good [minor damage and no active deterioration]
FR: Fair [some damage and/or active deterioration]
PR: Poor [significant damage and/or active deterioration]

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

The program allows you to track changes in condition. If you modify a condition, the program will include the Condition Reports supplemental in the Track Changes window when you save the record. A history of condition changes appears in the Condition Reports supplemental record. Refer to Section V of Chapter 3 for additional information on the Condition Reports supplemental record.

Condition Description (Condition Desc)

Memo field (F12 to expand).

Enter detailed descriptive information on a specimen's condition.

Study Number (Study #)

Straight Entry field.

Enter the unique study identification number. The unit assigns this number along with the permit number on the collection permit form. The format is "Unit-Number." "Unit" is the unit acronym, and "Number" is the unique tracking number. The study number links all permits, reports, and correspondence related to the study over the life of the project.

Example: ACAD-000001

Note: Study Number is NOT the same as the catalog number or accession number.

Other Numbers

Memo field (F12 to expand).

Record any other numbers that have been assigned to the specimen. This can include catalog numbers from a previous owner or collection or a number assigned by a partner repository if the specimen is not housed at the unit. If known, indicate a source for the other number.

Eminent Figure

User-built, stacked table (F5, Ctrl-F5, F12) that links to the Artist/Maker/Eminent Figure associated module.

Enter the full name, last name first, of the eminent person(s) directly associated with a specimen through use or possession. An eminent figure may be someone of international importance or someone of significance only to the site. To maintain consistent entries, develop a list of eminent figures related to the collection.

Example: Muir, John

As you type, the name will complete from an authority table of names from the Artist/Maker/Eminent figure associated module. Press the F5 key or click the artist icon  to view and select names from the table, or press F12 for an expanded field that allows you to enter names from the table.

Users with appropriate security rights can press Ctrl-F5 or click Edit Authority Table on the expanded field to add, delete, or edit names in the table. Click Add to add a new entry. The Artist/Maker/Eminent Figure screen allows you to enter information such as birth and death years, accomplishments, and nationality. The entry you add will appear in the table.

Refer to Section XI of Chapter 4 for information on the Artist/Maker/ Eminent Figure associated module.

To make multiple entries, press F12 to expand the field. Then click Add or press the down arrow to enter additional terms. On each new line, begin typing or press F5 to select the term from the table. When saved, a double dash -- separates terms.

Click Delete or press Ctrl-Delete to remove unwanted entries.

Note: The record link icon  next to the artist icon allows you to view the Artist/Maker record for your entry.

Eminent Organization (Eminent Org)

User-built, stacked table (F5, Ctrl-F5, F12).

Enter the full organizational name of the eminent organization directly associated with a specimen. An eminent organization may be of international importance or of significance only to the site. To maintain consistent entries, develop a list of eminent organizations related to the collection.

Example: The Nature Conservancy

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table, or press F12 for an expanded field that allows you to enter terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field. The expanded field (F12) also allows users to add, delete, and edit.

You can make multiple entries from the expanded field (F12). After entering the first term, click the Add link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another term from the table. When saved, a double dash -- separates entries.

Click Delete or press Ctrl-Delete to remove unwanted entries.

!Cataloger

User-built table (F5). **To save the record, you must complete this field.**

Enter the full name, last name first, of the person who cataloged the specimen.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select

Browse Authority Table or press Ctrl-F5, then click [Add Term](#). After entering the term, click [Save Change](#). Click [Select](#) to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Note: Change this field only when you make a significant modification to the record. Do not change the cataloger for minor modifications, such as location changes.

Catalog Date

Date field. (**Note:** This date field is not labeled on the screen.)

Enter the numeric month, day, and full year that the specimen was cataloged. The program will autofill as you type. To view a calendar and select the date, click the calendar icon  and click on the day.

Example: 4/30/2005

!Identified By

User-built, stacked table (F5, Ctrl-F5, F12) that links to the Names and Addresses associated module. History tracking field that links to the Scientific Name supplemental record. **To save the record, you must complete this field.**

Enter the full name of the person, last name first, who identified the specimen. If you do not have an entry, enter Unknown.

Example: Jones, Sarah

As you type, the word will complete from an authority table of names in the Names and Addresses associated module. Press the F5 key or click the person icon  to view and select names from the table, or press F12 for an expanded field that allows you to enter terms from the table.

Users with the appropriate security rights can add, delete, or modify names in the table. To add a name to the table, right click in the field, and select Browse Authority Table or press Ctrl-F5, then click [Add Term](#). The Names and Addresses associated module screen will appear. Enter the name in the Name ID field and complete the other fields on the screen. You can also press F12, click on the [Edit Authority Table](#) link, and then click [Add](#). The entry you add will appear in the table. You can then select it from the table.

Refer to Section XII of Chapter 4 for information on the Names and Addresses associated module.

You can make multiple entries from the expanded field (F12). After entering the first name, click the [Add](#) link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another name from the table. When saved, a double dash - - separates entries. Click [Delete](#) or press Ctrl-Delete to remove unwanted entries.

Note: The record link icon  next to the person icon allows you to view the Names and Addresses record for your entry.

The program allows you to track changes in identifier. If you change the name of the identifier, the program will include the Scientific Name supplemental in the Track Changes window when you save the record. A history of changes in identifier appears in the Scientific Name supplemental record.

Refer to Section XXII of Chapter 3 for information on the Scientific Name supplemental record.

Identified Date

Flexible date field. History tracking field that links to the Scientific Name supplemental record. (**Note:** This date field is not labeled on the screen.)

Enter the date of identification. Enter the most complete date possible and the full year.

You can enter the date directly in the field or click the calendar icon  for the flexible date entry screen. The flexible date entry allows you to enter a beginning and ending date by century or year, month, and day. It includes a user-built table of modifiers, for entries such as "circa." Refer to Chapter 1, System Basics, for additional information on flexible date fields. Use of the flexible date screen is optional.

The program allows you to track changes in the identification date. If you change the date the specimen was identified, the program will include the Scientific Name supplemental in the Track Changes window when you save the record. A history of identification date changes appears in the Scientific Name supplemental record.

Refer to Section XXII of Chapter 3 for information on the Scientific Name supplemental record.

Reproduction Method (Repro Method)

Bureau controlled table (F5). You may not add to, delete, or modify terms in this table.

Choose from the four entries in the table:

Cast
Mold
Other

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Catalog Folder

Logical Y/N field.

Select "Y" (Yes) if a catalog folder exists for the specimen.

Select "N" (No) if there is no catalog folder for the specimen.

Refer to the *MH-II*, Chapter 3, Cataloging, or the *MPH-II*, Chapter 3, Cataloging, for information on catalog folders.

You have completed the catalog screen. Click on the Coll. Site tab or press Ctrl-N to go to the collection site screen.

3. How do I complete the data fields on the collection site screen?

Follow the field-by-field instructions for completing the fields on the collection site screen. The instructions for each field are on the left side of the screen as you add or modify a record. Remember to press the Tab key to move out of a field.

Note: If you do not see the field help on the screen, go to View on the menu bar, choose Navigation Pane Options, and select Field Help.

Note: Fields marked with a ! in this manual are mandatory fields.

The screenshot shows the 'PARK - Natural History - Catalog Records - PARK' application window. On the left is a 'Field Help' pane for the 'Locality' field, which includes instructions: 'Special Memo field (F12 to expand, or right click and zoom). Linked to the Locality associated module. Enter the locality name for the collection site. Click on the Locality icon, or press F12 to access the Locality table. To choose an entry from the table, highlight the entry and click Save. Click Add to add a new locality record. The Locality associated module screen will appear. This screen allows you to enter information about the locality, such as ownership and related sites.' Below the help pane are 'Print Help' and 'Field Help' buttons. The main window area has tabs for 'Object Information', 'Supplemental Information', 'Images', and 'Multimedia'. Under 'Object Information', there are sub-tabs for 'Registration', 'Catalog', 'Coll. Site', 'Geology', 'Paleontology', 'Biology', and 'Unit'. The 'Coll. Site' tab is active, showing a form with fields for 'Description', 'Locality', 'Unit' (with a dropdown menu), 'County' (with a dropdown menu), 'Waterbody/Drain', 'UTM Z/E/N', 'Elevation', and 'Depos Environ'. There are also fields for 'Lat Long/W' and 'Depth'. At the bottom, a status bar shows 'Ready' and 'Add Mode' buttons. A timestamp at the bottom right reads 'Added by RED on 10/4/2009 11:48:32 AM Updated by RED on 10/4/2009 11:48:32 AM' with 'Save and Close', 'Save and Add Another', 'Save', and 'Cancel' buttons.

Locality

Special Memo field (F12 to expand, or right click and zoom).
Linked to the Locality associated module.

Enter the locality name for the collection site. You can enter the locality by one of the following options:

- Simply type the locality name in the field, *or*
- Click on the Locality icon, or press F12 to access the Locality table. To choose an entry from the table, highlight the entry and click Save. Click Add to add a new locality record. The Locality associated module screen will appear. This screen allows you to enter information about the locality, such as ownership and related sites.

Refer to Section X of Chapter 4 for information on the Locality associated module.

Unit

User-built table (F5, Ctrl-F5).

If the collection site is within unit boundaries, enter the unit acronym.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

!Township/Range/Section (TRS)

Formatted memo field. **To save the record, you must complete one of these fields: Township/Range/Section, UTM Coordinates, or Latitude and Longitude.** If you don't have any data for these fields, enter Unknown in the memo subfield of the Latitude and Longitude field.

Press F12, or right-click and select zoom from the menu to expand the field, or click the formatted memo icon  located in the field. The field will also expand as you begin to type.

The field will expand into nine subfields: Township, Range, Section, three Quarter subfields, Quad Map Name, Quad Map Scale, and Quad Map Year. An underline separates the subfield entries on the collection site screen.

Enter the township, range, and section of the collection site, if the collector provides these data. The subfields are formatted as follows:

Township = T. + 3 numbers and 1 character
Range = R. + 4 numbers and 1 character
Section = Sec. + 2 numbers

Example: T.20 N._ R.118 W._ Sec.5.

Enter the appropriate Quarter abbreviation NE, NW, SE, or SW. The smallest quarter section is listed first. In the U.S. and Canadian system of land surveying, the smallest quarter section is a tract of land that contains 10 acres while the largest quarter section is half a mile square that contains 160 acres (648 hectares). The subfields are formatted as follows:

Quarter = 2 characters + 1/4 (First = 10 acres)
Quarter = 2 characters + 1/4 (Second = 40 acres)
Quarter = 2 characters + 1/4 (Third = 160 acres)

Example: NE 1/4

Quad Map Name (straight entry):

Enter the quadrangle map name from the USGS topographic map series that was used to determine the township/range/section data. Most USGS map series divide the United States into quadrangles bounded by two lines of latitude and two lines of longitude. For example, a 7.5-minute map shows an area that spans 7.5 minutes of latitude and 7.5 minutes of longitude, and it is usually named after the most prominent feature in the quadrangle. More than 55,000 7.5-minute maps were made to cover the 48 conterminous States. This is the only uniform map series that covers the entire area of the United States in considerable detail.

Quad Map Scale (user-built authority table -- F5, Ctrl-F5):

Click the down arrow or press F5 and choose the scale of the quadrangle map from the USGS topographic map series that was used to determine the township/range/section data. The best known USGS maps are the 1:24,000-scale topographic maps, also known as 7.5-minute quadrangles or "quads". Maps at scales of 1:250,000 (1 inch = about 4 miles), 1:500,000 (1 inch = about 8 miles), and 1:1,000,000 (1 inch = about 16 miles) cover very large areas on each sheet and are used in regional and statewide planning.

Quad Map Year (straight entry):

Enter the year that the quadrangle map was published. The United States Geological Survey has been the primary civilian mapping agency of the United States with the responsibility for mapping the country since 1879.

County

User-built table (F5, Ctrl-F5).

Enter the county from which the specimen was originally collected.

Example: Orange

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

State

User-built table (F5, Ctrl-F5).

Enter the state from which the specimen was originally collected. Use the two-letter US Postal Code. The program includes a table for all states.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Reference Datum

Bureau controlled table (F5). You may not add to, delete, or modify terms in this table.

Enter the reference datum for the specimen by choosing an entry from the table. All coordinate data such as UTM or longitude and latitude used to identify the spatial coordinates of a locality must be referenced to a datum. This information may be obtained while using a Global Positioning System (GPS) or from the map that is used to determine the coordinates. The two datums used for North America are NAD 27 or NAD 83. One must be selected.

Waterbody/Drainage (Waterbody/Drain)

Formatted memo field. Press F12, or right-click and select zoom from the menu to expand the field, or click the formatted memo icon  located in the field. The field will also expand as you begin to type.

The field will expand into two subfields: Waterbody and Drainage. An underline separates the subfield entries on the collection site screen.

Both subfields are memo fields. F12 expands each subfield.

Waterbody (memo field):

For aquatic and marine sites only, record the waterbody of the collection site.

Example: Merced Lake

Drainage (memo field):

For aquatic and marine sites only, record the drainage of the collection site.

Example: Gulf of Mexico
Potomac River

**!UTM Coordinates
(UTM Z/E/N)**

Straight entry numeric field. **To save the record, you must complete one of these fields: Township/Range/Section, UTM Coordinates, or Latitude and Longitude.** If you don't have any data for these fields, enter Unknown in the memo subfield of the Latitude and Longitude field.

Enter the UTM (Universal Transverse Mercator Grid) coordinates for the collection site, if the collector provides these data. You cannot enter characters. The field is divided into three parts separated by slashes (/):

- a. UTM Zone = 2 numbers
- b. Easting = 6 numbers
- c. Northing = 7 numbers

Example: 05/291000/4264000 [entry for UTM zone 5, 291000E, 4264000N]

**!Latitude and Longitude
(Lat LongN/W)**

Formatted memo field. Press F12, or right-click and select zoom from the menu to expand the field, or click the formatted memo icon  located in the field. The field will also expand as you begin to type. **To save the record, you must complete one of these fields: Township/Range/Section, UTM Coordinates, or Latitude and Longitude.** If you don't have any data for these fields, enter Unknown in the memo subfield of the Latitude and Longitude field.

The field will expand into seven subfields: Latitude Longitude, Latitude Degree, Latitude Minutes, Latitude Seconds, Longitude Degree, Longitude Minutes, and Longitude Seconds. An underline separates the subfield entries on the screen.

Enter the standard latitude and longitude for the collection site, if the collector provides these data.

Latitude Longitude (memo field):

F12 expands the subfield.

The other subfields are formatted as follows:

Latitude Degree = 2 numbers
Latitude Minutes = 2 numbers
Latitude Seconds = 2 numbers
Longitude Degree = 3 numbers
Longitude Minutes = 2 numbers
Longitude Seconds = 2 numbers

Precede numbers of less than two or three digits with a zero.

Example: __38 __30 __15 __118 __22 __30 [entry for 38 30' 15" N, 118 22' 30" W]

Elevation

Straight entry field.

Enter elevation, in meters, for terrestrial collection sites. Do not convert English measurements.

Example: 550 m.

The field contains space to enter both metric and English measurements.

Depth

Straight entry field.

Enter depth, in meters, for aquatic/marine collection sites. Do not convert English measurements.

Example: 5 m.

The field contains space to enter both metric and English measurements.

Depositional Environment (Depos Environ)

Memo field.

Do not use this field for biology specimens.

You have completed the collection site screen. Click on the Biology tab or press Ctrl-N to go to the biology screen.

4. How do I complete the data fields on the biology specialty screen?

Follow the field-by-field instructions for completing the fields on the biology specialty screen. The instructions for each field are on the left side of the screen as you add or modify a record. Remember to press the Tab key to move out of a field.

Note: If you do not see the field help on the screen, go to View on the menu bar, choose Navigation Pane Options, and select Field Help.

Note: None of the fields on this screen are mandatory.

The screenshot shows the 'PARK - Natural History - Catalog Records - PARK' application window. On the left is a 'Field Help' pane with text explaining the 'Lower Taxon' field, noting it has been superseded by Linnaean Taxon and providing an example for insects. The main window displays a form for 'Collections - PARK - Natural History - Catalog Records' with tabs for 'Object Information', 'Supplemental Information', 'Images', and 'Multimedia'. The 'Object Information' tab is active, showing a grid of fields: 'Registration', 'Catalog', 'Coll. Site', 'Geology', 'Paleontology', 'Biology', and 'Unit'. The 'Biology' tab is selected, revealing fields for 'Lower Taxon', 'Habitat/Comm', 'Habitat', 'Slope', 'Aspect', 'Soil Type', 'For/Per/Sub', 'Assoc Spec', 'Type Specimen', 'Threat/Endang', 'T/E Date', 'Rare', 'Exotic/Native', 'I-M Network', 'Age', 'Sex', and 'Training'. At the bottom, a status bar shows 'Ready' and 'Add Mode' buttons.

Lower Taxon

User-built table (F5, Ctrl-F5)

Note: This field has been superseded by Linnaean Taxon on the registration page. It has been maintained to preserve legacy data entered in previous versions of **ANCS+**. Data previously entered in Lower Taxon is now entered in Order, Family, and Linnaean Taxon on the registration page.

If you wish to enter data, as you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table. (**Note:** If there are no terms in the table, you will need to add terms before using these features.)

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Habitat/Community (Habitat/Comm)

User-built table (F5, Ctrl-F5)

Enter information from the label about the general habitat or community type.

Example: marsh
spruce/fir forest
grassland

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table. (**Note:** If there are no terms in the table, you will need to add terms before using these features.)

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change, then click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Habitat

Memo field (F12 to expand).

Enter specific information from the label about the habitat or community type.

Example: Subalpine fir/grouse whortleberry habitat type
Geyer will/beaked sedge riparian community type

Record any additional habitat-related information that does not fit in the other habitat fields (habitat/community, aspect, slope, soil type, substrate, and associated species).

Slope

Memo field (F12 to expand).

Enter the slope as written on the label. There are several methods of determining slope: using degrees, using percentages, or using a slope ratio.

Be sure to include all the information on the label.

Example: 45 degree slope
20% slope

Aspect

Memo field (F12 to expand).

Enter the direction towards which a slope faces. Aspect is usually expressed as a direction such as “southeast.”

Soil Type

Memo field (F12 to expand).

Enter the soil type, if present on the label.

Note: For a list of standard soil types, see *MH-II*, Appendix H.

**Formation/Period/Substrate
(For/Per/Sub)**

User-built, stacked table (F5, Ctrl-F5, F12).

Enter the substrate if present on the label, or any information on the rock formation.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table, or press F12 for an expanded field that allows you to enter terms from the table. (**Note:** If there are no terms in the table, you will need to add terms before using these features.)

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field. The expanded field (F12) also allows users to add, delete, and edit.

You can make multiple entries from the expanded field (F12). After entering the first term, click the Add link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another term from the table. When saved, a double dash -- separates entries.

Click Delete or press Ctrl-Delete to remove unwanted entries.

**Associated Species
(Assoc Spec)**

Memo field (F12 to expand).

Enter other species that are found in the same environment or location, if documented on the label. If parasites (external or internal) were recovered from the specimen and curated, list the name of the organism and its catalog number.

Type Specimen

User-built, stacked table (F5, Ctrl-F5, F12).

If appropriate, enter the type for the specimen, or “Voucher” if the specimen is a voucher specimen. This indicates that the specimen has been recognized in publication as a “type specimen.” A type specimen is the individual specimen on which a Latin name and scientific description are based. Recognizing types is the job of the specialist. Look for the word “Type” on the label or on a separate annotation label fixed to the specimen.

Example: Allotype
Holotype
Paratype

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table, or press F12 for an expanded field that allows you to enter terms from the table. (**Note:** If there are no terms in the table, you will need to add terms before using these features.)

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field. The expanded field (F12) also allows users to add, delete, and edit.

You can make multiple entries from the expanded field (F12). After entering the first term, click the Add link or press the down arrow on the keyboard. An additional field appears below the first entry for you to select another term from the table. When saved, a double dash -- separates entries.

Click Delete or press Ctrl-Delete to remove unwanted entries.

***Threatened/Endangered
Species
(Threat/Endang)***

Formatted memo field. Press F12, or right-click and select zoom from the menu to expand the field, or click the formatted memo icon  located in the field. The field will also expand as you begin to type.

The field will expand into three subfields: Threatened and Endangered Status, Synonym, and Synonym Name. An underline separates the subfield entries on the biology specialty screen.

Threatened and Endangered Status (Th. En. Stat.) (Bureau controlled table):

You may not add to, delete, or modify terms in this table.

Enter the Federal status under the Endangered Species Act, if the specimen is a threatened or endangered species. Choose from the following options:

C = Taxa for which the Service has on file sufficient information on biological vulnerability and threat(s) to support proposals to list them as endangered or threatened species.
E = Endangered
PE = Proposed Endangered
PT = Proposed Threatened
T = Threatened

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Synonym (Logical Y/N field):

Select "Y" (Yes) if the specimen name is a synonym for taxa that fall under the codes in the Threatened and Endangered Status table.

Select "N" (No) if the specimen is not a synonym for taxa that fall under the codes in the Threatened and Endangered Status table.

Synonym Name (User-built table):

Enter the name that is synonymous for the specimen name that appears on the catalog record. The synonymous name must be a taxa that falls under the codes in the Threatened and Endangered Status table.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table. (**Note:** If there are no terms in the table, you will need to add terms before using these features.)

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

***Threatened/Endangered Date
(T/E Date)***

Date field.

Enter the date of the Federal Register that most recently reflects the current status of the species.

Enter the numeric month, day, and full year. The date will autofill as you type. You can also click the calendar icon  to select a date.

Example: 4/30/1994

Rare

Memo field (F12 to expand).

Document the presence of a taxa on any other list denoting rarity in the area, such as regional, state, county, or unit lists.

Example: lists of species of special concern maintained by state heritage programs.

Exotic/Native

Bureau controlled table (F5). You may not add to, delete, or modify terms in this table.

Note whether the species is native or exotic. Choose from the following options:

exotic
native

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

I-M Network

The system will automatically enter the name of the Inventory and Monitoring Network based on the acronym entered in the catalog number. This is a display only field and cannot be directly edited.

Age

Memo field (F12 to expand)

Enter the age of the specimen.

Sex

Bureau controlled table (F5). You may not add to, delete, or modify terms in this table.

Enter the sex of the specimen. Choose from the following options:

Female
Hermaphrodite
Male
Unknown

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

You have completed the biology screen. Click on the Unit tab or press Ctrl-N to go to the unit screen.

5. *How do I complete the data fields on the unit screen?*

There are ten user-defined fields on the unit screen. Enter data in these fields that are unit-specific and that do not fit on the other four screens.

Note: All disciplines in the NH directory share the ten unit fields. You may want, or need, to reserve some user fields for paleontology, and/or geology records.

The screenshot shows a software window titled "PARK - Natural History - Catalog Records - PARK". The window has a menu bar (File, Edit, View, Record, Tools, Help) and a toolbar. On the left is a "Navigation Pane" with "Field Help" selected. The main content area is titled "Collections - PARK - Natural History - Catalog Records" and has tabs for "Object Information", "Supplemental Information", "Images", and "Multimedia". Below these are sub-tabs for "Registration", "Catalog", "Coll. Site", "Geology", "Paleontology", "Biology", and "Unit". The "Unit" tab is active, showing a "Description" field and ten "User" fields (User 1 through User 10). The status bar at the bottom indicates "Ready" and "Add Mode".

If you are authorized, you may modify each field by right clicking and selecting Properties. In the Field Properties screen, click the modify button, press F10 or select Modify This Record on the Edit menu. Then select the Default Label/Help tab. Change the label and field type as needed.

Example: Field Label = Weather
Field Type = Memo

Refer to Chapter 1, System Basics, for additional information on defining user fields and a description of field types.

D. ITIS

1. *What is ITIS?*

The Integrated Taxonomic Information System (ITIS) is a taxonomic database developed and maintained at the National Museum of Natural History, Smithsonian Institution. It was established because the White House Subcommittee on Biodiversity and Ecosystem Dynamics identified systematics as a research priority that is fundamental to ecosystem management and biodiversity conservation.

ITIS is the result of a partnership of Federal agencies formed to satisfy their mutual needs for scientifically credible taxonomic information. The goal is to create an easily accessible database with reliable information on species names and their hierarchical classification. The database is reviewed periodically to ensure high quality with valid classifications, revisions, and additions of newly described species.

ITIS does not intend to serve as a forum for cutting-edge taxonomic classifications. Rather, ITIS is meant to serve as a standard to enable the comparison of biodiversity datasets, and therefore aims to incorporate classifications that have gained broad acceptance in the taxonomic literature and by professionals who work with the taxa concerned.

For more information visit the ITIS website <http://www.itis.gov>.

2. *Why is ITIS used?*

Taxonomy is a dynamic discipline and while different taxonomists may propose different interpretations on the relationships of organisms and the names applied, there is a need for a consistent usage of names both within a database and between different databases. The ITIS database provides this standardization for taxonomy.

The taxonomy and classification in ITIS have been adopted by NPSpecies as its standard. In order to ensure consistency between different databases, ITIS has also been incorporated as the taxonomic standard for ICMS.

3. *How does ITIS work?*

ITIS assigns a number, called the Taxonomic Serial Number (TSN), to each species name. The TSN is used to link each species name to its hierarchical classification.

4. *Is ITIS complete?*

Many, but not all, taxonomic groups have been completed. To view the status for a specific group visit <http://www.itis.gov/status.html>.

5. *What should I do if ITIS hasn't completed the group I am cataloging?*

The fields that are automatically filled in using ITIS can also be filled in manually. See individual field descriptions for instructions. If you are cataloging specimens that are not covered by ITIS, you should manually enter the data. You can use functions such as Modify All, Carry Over, Defaults, and Quick Entry to speed the data entry process.

6. *How will ITIS be updated?*

Updates to ITIS will be included in updates to ICMS.

7. *Why are some names listed as "valid" or "accepted" and some terms listed as "invalid" or "not accepted"?*

The status of a name is determined by the taxonomic judgment of an author and/or an ITIS steward. The current standing may be valid/accepted or invalid/not accepted.

- valid or accepted –This means the name is broadly used in the scientific community and recommended by ITIS. When there is no consensus (e.g., multiple classifications exist), ITIS and its stewards have made a

choice as to which name to use. Valid is used in the Animalia and Monera kingdoms; accepted is used in the Plantae and Fungi kingdoms.

- invalid or not accepted –This means the name is a synonym, and not the currently accepted name. Invalid is used in the Animalia and Monera kingdoms; not accepted is used in the Plantae and Fungi kingdoms.

8. *How can I find the “valid” or “accepted” name?* Go to the ITIS web site, currently <http://www.itis.gov>. Search for the invalid or not accepted name. The web page for the invalid or not accepted name will include the valid or accepted name.
9. *Why are some of the Taxonomic Serial Numbers (TSN) negative?* ITIS was designed for all living biological organisms; it does not now, and likely will not in the future, include extinct biological organisms. In order to make ITIS useable for paleontology specimens, extinct organisms need to be included. To ensure there is no overlap between TSNs for paleontology terms and TSNs already in ITIS, the Bureau assigns negative numbers to the paleontology terms.
10. *How do Paleontology terms get into ITIS?* For the NPS, field paleontologists submit a list of terms to the Park Museum Management Program. The terms are reviewed by the Senior Natural History Curator, and NPS appends the terms to ITIS following the ITIS data standards. Other bureaus may establish procedures for submitting and reviewing additional terms as needed.

E. Find Specimen

1. *What is Find Specimen?* The Find Specimen link next to the TSN field lets you search for and select the name of the specimen you are cataloging. After selecting a term from the Find Specimen list, the classification and scientific name for the specimen will be automatically filled in by the program. This makes entering catalog records faster and more accurate. Find Specimen uses the Integrated Taxonomic Information System (ITIS) as its authority of accepted terms, with additional terms from Bureau paleontology collections.

Note: ITIS is being continually updated with new taxa. It is possible that some organisms in a unit are not in ITIS yet. For these taxa that are not in ITIS, the taxonomy may have to be entered by the user. Refer to Section C above for information on entering the taxonomy into the individual fields. Refer to Section D above for information on ITIS.

2. *Who can use Find Specimen?* Anyone performing data entry tasks in natural history catalog records can use Find Specimen.
3. *Which fields will be updated?* Selecting a valid or accepted term in Find Specimen will update these fields:

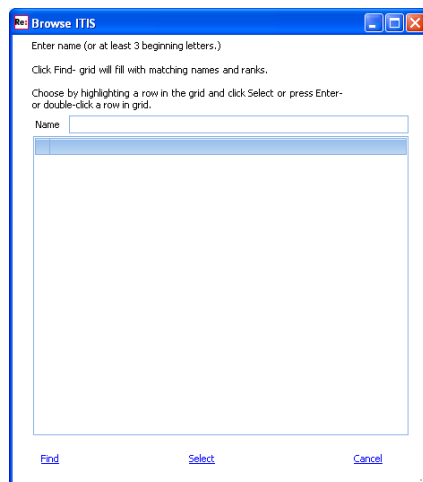

Kingdom
Phylum/Division
Class
Order
Family
Scientific Name
Common Name
TSN
Linnaean Taxon.

Note: If you are updating an existing record that has data in these fields, the data will be changed if there is data available for them in the ITIS authority tables.

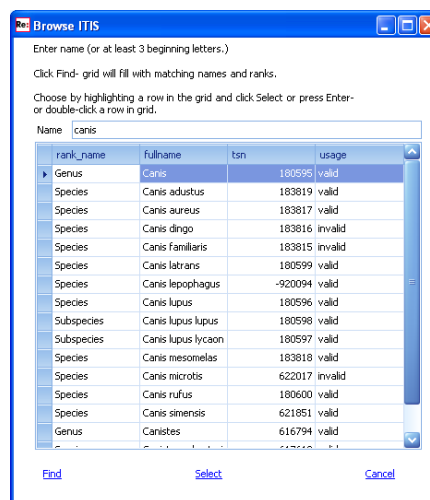

4. How do I use Find Specimen?

To use Find Specimen, in Add, Modify or Copy mode on a record:

- Enter BIOLOGY in Class 1
- Click the [Find Specimen](#) link. The Browse ITIS window will open.

- In the Name field, enter all or part of the first term for the specimen, such as the Genus. You must enter at least 3 letters of the term.
- Click the [Find](#) link at the bottom left. The grid will display matching terms from the ITIS authority table. The grid shows the rank, full name, TSN, and usage (whether the term is valid, invalid, accepted, or not accepted). For example, enter 'Canis' in the Name field

rank_name	fullname	tsn	usage
Genus	Canis	180595	valid
Species	Canis adustus	183819	valid
Species	Canis aureus	183817	valid
Species	Canis dingo	183816	invalid
Species	Canis familiaris	183815	invalid
Species	Canis latrans	180599	valid
Species	Canis lepophagus	-920094	valid
Species	Canis lupus	180596	valid
Subspecies	Canis lupus lupus	180598	valid
Subspecies	Canis lupus lycaon	180597	valid
Species	Canis mesomelas	183818	valid
Species	Canis microtis	622017	invalid
Species	Canis rufus	180600	valid
Species	Canis simensis	621851	valid
Genus	Canistes	616794	valid

- Select a term from the list, and click the [Select](#) link at the bottom. The Browse ITIS window will close, and the catalog record will be updated.

Notes: If you select a term that is valid or accepted, all the fields from Kingdom to Scientific Name, and possibly Common Name, will be completed automatically. If you select a term that is invalid or not accepted, only some of the fields will be completed automatically.

If you select a term with the rank of Family or higher, the Scientific Name will not be completed. You must enter the Scientific Name manually in order to save the catalog record.

Selecting a term of a specific taxonomic rank (Family, Genus, Species, etc.) will update only the fields for that rank and higher on the catalog record.

See Section D for information on valid or accepted and invalid or not accepted terms.

F. Saving the Record

1. *What is the Track Changes screen that appears when I save a catalog record?*

When you save a catalog record, the program will prompt you for information to track location, condition, catalog notes and scientific name for the specimen. The system will create supplemental records from the information you provide. The supplemental records allow you to see on one screen all the changes in location, condition, scientific name and cataloging activity for the specimen.

You may choose not to create the supplementals and still save the record. This saves a small amount of time when entering or modifying records. However, the benefits of having location, condition, scientific name and catalog activity histories outweigh the time it takes to create them. Taking advantage of this feature in the program is highly recommended.

When creating a supplemental for tracking, you have the choice of accepting the default entries on some fields in the supplemental, or manually updating the supplemental fields.

To not create a supplemental, click the Do Not Update box on the supplementals you do not wish to create.

Click OK to save the entries from the Track Changes screen in the supplemental records.

Do not click the Cancel link here or you will cancel the entire record, not just the supplemental update.

Track Changes

Enter/verify values to help track changes.

☐ Do Not Update

CONDITION REPORTS Supplemental Information

CONDITION: [dropdown]
AUTHORIZED BY: [dropdown]
REASON: [dropdown]
DATE: [calendar] Use automatic value
COND DESC: [text area] Use automatic value

☐ Do Not Update

LOCATION Supplemental Information

REASON: [dropdown]
AUTHORIZED BY: [dropdown] Use automatic value
START DATE: [calendar] Use automatic value
LOCATION: [text area]

OK Cancel

2. *How do I complete the condition tracking supplemental?*

If you add or change a condition in the Condition field, the program will include the Condition Reports supplemental in the Track Changes screen when you save the record. Complete the Condition Reason field manually. The Condition Reason field is a user-built table (F5, Ctrl-F5). Enter the reason for the condition.

Example: Water Damage
Conservation

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

You can also change the Date and/or Condition Description if needed. These fields are set to use automatic values. To change the entries, select "Manually update value" from the pull down menu next to the field.

Note: The entry from the Condition Description field appears on the update screen. If you have no entry in the Condition Description field, the field on the prompt screen will be blank. You can enter a condition description on the prompt screen, but it will not transfer back to the catalog record.

Refer to Section V of Chapter 3 for additional information on the Condition Reports supplemental record.

3. *How do I complete the location tracking supplemental?*

If you add or change a location, the program will include the location supplemental in the Track Changes screen when you save a record. Complete the Location Reason field manually. The Location Reason field is a user-built table (F5, Ctrl-F5). Enter the reason for the location.

Example: Storage
Summer Exhibit

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Note: For permanent locations, enter "Permanent Location" in the Location Reason field. This entry will allow you to print an Object Temporary Removal Slip (Form 10-97) to document removal from a permanent location.

You can also change the Authorized by and Start Date if needed. These fields are set to use automatic values. To change the entries, select “Manually update value” from the pull down menu next to the field.

Refer to Section XII of Chapter 3 for additional information on the Location supplemental record.

4. *How do I complete the catalog notes tracking supplemental?*

If you add or change a catalog record, the program will include the Catalog Notes supplemental in the Track Changes screen when you save the record. All entries are autofilled from the previous data entry session. To change the entries for any of the fields, select “Manually update value” from the pull down menu next to the field.

The Cataloger field is a user-built table (F5, Ctrl-F5). Enter the last name of the cataloger.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

Users with the appropriate security rights can add, delete, or modify terms in the table. To add an entry to the table, right-click in the field and select Browse Authority Table or press Ctrl-F5, then click Add Term. After entering the term, click Save Change. Click Select to enter the term in the field.

Press Ctrl-Delete to remove unwanted entries.

Note: The name you enter at the prompt does not change the name in the Cataloger field on the record.

The Level field is a Bureau controlled table (F5). You may not add to, delete, or modify terms in this table.

Choose from the entries in the table as defined below:

Catalog - you have completed all fields for which there is information.

Minor Change- you have made minor changes, such as spelling corrections or location changes.

Recatalog - you have made substantial changes to the data, such as changes in date, classification, and specimen name.

Registration - you have completed only the registration screen and mandatory fields on the other 3 screens.

As you type, the word will complete from an authority table of acceptable terms. Press the F5 key or click the down arrow icon to view and select terms from the table.

The Notes field is a Memo field (F12 to expand). You may also want to enter notes on the cataloging activity at this time.

Refer to Section III of Chapter 3 for additional information on the Catalog Notes supplemental record.

5. *How do I complete the scientific name tracking supplemental?*

If you add or change the Scientific Name, Identified By, or Identified Date fields, the program will include the Scientific Name supplemental in the Track Changes screen when you save the record.

Enter a reason for the change in the Reason field.

Example: annotation
 misidentification
 re-verification of the name by a different identifier

Refer to Section XXII of Chapter 3 for additional information on the Scientific Name supplemental record.

G. Supplemental Records

1. *How do I complete the supplemental records that are associated with a biology record?*

Refer to Chapter 3, Supplemental Records, for instructions on completing the supplemental records. Use these records to enter data on appraisals, component parts, images, preservation work, provenance, related databases, research notes, significance, and publication citations.

The program creates the supplemental records for catalog notes, condition reports, location, object status, and scientific name when you save a record. See Section F above. The program will prompt you for information, such as the level of cataloging, or the reason for the location. When you complete the information, the program saves it as a supplemental record.

Note: The program creates the Object Status supplemental record, but the program does not prompt you for information to complete the record.

2. *What supplemental records are created automatically by the program?*

The program automatically creates supplemental records for deaccessions, exhibits, restrictions, loans in, loans out, and preparation/treatment. Each of these supplemental records has a corresponding associated module. When you create a record in the associated module, such as an outgoing loan record, you can attach catalog records to it. The program will then automatically create supplemental records for each attached catalog record. Refer to Chapter 4, Associated Modules, for instructions on completing records in the associated modules.

3. *How do I know whether a supplemental record contains information?*

The supplemental records are located on the Supplemental Information tab on the Object Catalog Record. When you look at the list of supplemental records, a flag icon  marks the records that contain information.

REASON	BASIS	VALUE	DATE	NOTES
ACCESSION		0.00	7/12/1986	
SURVEY	CATALOGER	100.00	7/12/1983	

H. Printing the Record

Refer to Chapter 5, Printing and Reports for additional information.

1. How do I print a catalog record?

NPS Form 10-254B (selected fields)

or

DOI NH Museum Catalog Record

There are three ways to print the information in a catalog record:

The NPS Form 10-254B and DOI NH Museum Catalog Record reports print on blank paper. The NPS Form 10-254B is the same as the preprinted NPS Form 10-254B.

To access and print the Form 10-254B or DOI NH Museum Catalog Record, follow these steps in View Mode:

- click on the Re:discovery Reports icon  on the button bar, *or*
- go to Record on the menu bar and choose Reports from the pull-down menu. Select Re:discovery Reports from the submenu.

- select 10-254b Nh Museum Catalog Record or DOI NH Museum Catalog Record to print the natural history catalog record
- select Run for Current Record Only or Run for All Visible Records. You can print one record or a group of records. Refer to Chapter 7 for creating groups of records.
- choose the Destination (Printer, Screen or RTF) and then click Print

Complete Record (all fields)

The program allows you to print all the fields on the record that contain data, including expanded memo fields. The fields print alphabetically on 8½ x 11 inch paper. Discipline-specific field names appear as "Specialty" with a number, such as Specialty 1.

To access and print the complete record, follow these steps in View Mode:

- click on the Re:discovery Reports icon  on the button bar, *or*
- go to Record on the menu bar and choose Reports from the pull-down menu. Select Re:discovery Reports from the submenu.
- select All Fields to print the entire catalog record
- select Run for Current Record Only or Run for All Visible Records. You can print one record or a group of records. Refer to Chapter 7 for creating groups of records.
- choose the Destination (Printer, Screen or RTF) and then click Print

Full View

To print the record in Full View:

- click the Full View icon  on the button bar
- click the Print button in the Full View window

2. Must I print a catalog record?

No. Printing catalog records at the unit is optional.

For NPS, you must submit electronic records on a fiscal year basis to the NPS National Catalog in Harpers Ferry, West Virginia. National Catalog staff will print an archival copy of the 10-254B for storage there. Upon your request, the National Catalog staff will print paper copies of 10-254Bs for your park.

I. Mass Taxonomy Update

1. What is Mass Taxonomy Update?

Mass Taxonomy Update lets you quickly update the classification and scientific name of specimens in your Natural History catalog. The scientific name and classification assigned to specimens may change over time as more precise identifications are made for plants and animals. Mass Taxonomy Update uses the Integrated Taxonomic Information System (ITIS) as its authority of accepted terms, with additional terms from paleontology collections. ITIS is updated frequently, and will be updated periodically in ICMS to include the most up-to-date terms. See Section D for information on ITIS.

2. Who can use Mass Taxonomy Update?

Mass Taxonomy Update is available only to users with Administrator rights. Refer to Section VI of Chapter 9 for information on User Security.

Note: Mass Taxonomy Update is a powerful tool, similar to Modify All or Global Search & Replace. It lets you update many records very quickly. Take care to ensure you are updating only the records you intend to update, by activating a Tag or Filter, before using Mass Taxonomy Update.

3. *How do I access Mass Taxonomy Update?*

Mass Taxonomy Update is available from the Edit menu. It is active only for Biology and Paleontology catalog records. You must activate a Tag Set or Filter, or select multiple records in the List Pane to use the Mass Taxonomy Update function.

4. *Which records will be updated?*

Mass Taxonomy Update will only change Biology and Paleontology catalog records. Geology records will not be changed by Mass Taxonomy Update.

Only Biology and Paleontology records where the existing data matches the ITIS authority tables will be changed. Biology and Paleontology records that can't be matched with valid or accepted ITIS terms won't be changed.

5. *Which fields will be updated?*

Mass Taxonomy Update will update these fields:

Kingdom
Phylum/Division
Class
Order
Family
Scientific Name
Common Name
TSN
Linnaean Taxon.

These fields will only be changed if there is data available for them in the ITIS authority tables.

6. *Will previous Scientific Names be saved?*

Yes. Mass Taxonomy Update stores the previous Scientific Name data in the Scientific Name supplemental record.

7. *How does Mass Taxonomy Update change a record?*

Mass Taxonomy Update uses the following logic to match a catalog record with accepted terms in the ITIS authority tables.

- If the record includes a Taxonomic Serial Number in the TSN field, Mass Taxonomy Update will update the record based on that TSN. The TSN is a unique identifying number for every term in the ITIS authority tables.
- If the record does not include a TSN, Mass Taxonomy Update will compare the Scientific Name to the ITIS authority tables. It will attempt to match the genus, species, and subspecific epithets (subspecies, variety, and forma), if available. If a match is found, and the matching record is valid or accepted in ITIS, the catalog record will be updated. If a match is found and the matching record is invalid or not accepted in ITIS, the catalog record will not be updated.

8. *How will I know which records were updated?*

Mass Taxonomy Update will display a report, showing the catalog number, scientific name, and TSN of every record in your Tag or Filter. The report shows which records were changed and which were not changed. You should print this report, or save it to a file, for future reference. See the instructions below for how to print or save the report.

9. *Why might a record not be updated?*

If Mass Taxonomy Update does not change a record you think should have been changed, it may be for one of the following reasons:

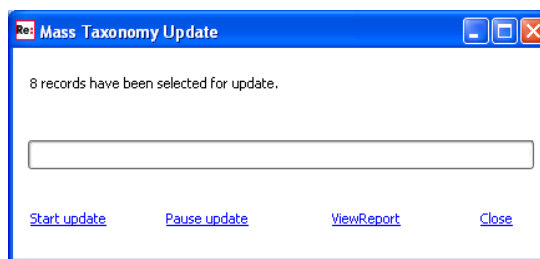

- A typographical error (misspelling) in the Scientific Name field prevented finding a match in the ITIS authority tables. Check the exact spelling of the scientific name. Compare it with the terms available under Find Specimen, or on the ITIS web site.
- The Scientific Name data was matched to the ITIS authority table, but the ITIS term is not valid or accepted. Only ITIS terms that are listed as “valid” or “accepted” will be updated by Mass Taxonomy Update. Use the [Find Specimen](#) link to search for the scientific name. Find Specimen will show whether the term is valid, invalid, accepted, or not accepted. See Section E above for information on using Find Specimen.
- The Scientific Name data was not entered in a standard format, which prevented finding a match in the ITIS authority tables. Standard formats for Scientific Name include:
 - Proper use of the Genus, Species, Subspecies, Variety, and Forma subfields, *or*
 - Data entered according to the instructions and examples in *NPS Museum Handbook*, Part II, Appendix H: Natural History, sections B.1.b and B.2.b. Generally, the first letter of the genus is always capitalized, and the specific epithet (species, subspecies, etc.) is all lower case. Species authors are entered with the first letter capitalized, according to strict conventions.
- The Scientific Name was entered in ALL CAPS, including the species author. Mass Taxonomy Update will translate ALL CAPS data into proper format (as described in the *NPS Museum Handbook*, Part II, Appendix H), which may render the species author as a possible trinomial term and prevent a match with the ITIS authority tables.

10. *How do I use Mass Taxonomy Update?*

Make a backup of your Natural History directory before using Mass Taxonomy Update. See Chapter 9, Section II for information on making a backup.

To use the Mass Taxonomy Update function:

- Select the records you want to update. You can activate a Tag Set or Filter, select multiple records in the List Pane using shift-click or ctrl-click, or use Quick Filter. See Chapter 7 for information on limiting your visible data.
- From the Edit menu, choose Mass Taxonomy Update. The Mass Taxonomy Update window will open. It will indicate the number of records selected for update.

- Click the Start Update link to start the update. **Note:** If you are updating a large number of records, you can click Pause Update to pause the update process.
- When the update is complete, click View Report to preview the update report.

Updated	Scientific Name	Catalog No.	TSN
no	Climacium dendroides (Hedw.) W. & M.	PARK 1007

- In the report Preview window, choose Print on the File menu to print the report (recommended). You can also choose Export Document on the File menu to save the report as a PDF format file (recommended). When finished, close the preview window by clicking the red X in the upper right corner.
- Close the Mass Taxonomy Update window by clicking Close.
- Click the Refresh button or select Refresh on the Edit menu to refresh the List Pane and view the updated catalog records.
